CUSTOMS DUTIES, etc.

For the purpose of assessing the amount of any customs duty, the value of goods for purposes of duty shall be taken to be the domestic value, as hereafter defined, together with the extra cost of packing and packages for export, carriage to the port of shipment and all other expenses incidental to placing the goods on board the ship, together with the cost of freight, insurance, and all other charges up to the time of importation into the Territory: Provided that in no case shall the value for purposes of duty be less than the cost of the goods to the importer at the place of importation.

The expression "domestic value" shall, in respect of imported goods, mean the market price at which at the time of exportation such or similar goods are offered for sale, for consumption in the country from which the goods are exported, to all purchasers in the usual wholesale quantities in the ordinary course of trade in the principal markets of such country including the cost of packages ordinarily used in those markets, but not including excise duties payable in that country.

Provided that the value of goods arriving in the original coverings in which they were exported from the country of manufacture or shipment, for importation at any inland customs station in the Territory, shall be ascertained as though the place of importation were the first port of entry on the east coast of Africa.

GENERAL NOTES.

The headings of the respective classes in this Schedule are used only for convenience of classification, and shall not in any way affect the interpretation of the Tariff.

“n.e.e.” means “not elsewhere enumerated.”

The term “in bulk,” when it appears in the Tariff, means—

- (a) goods loose without packing, or loose in barrels, casks, or any other single outside package, but not including goods imported by parcel post;
- (b) when in internal packages, that the net contents of any immediate container of goods weigh not less than ten pounds or measure not less than one imperial gallon.

Goods chargeable with duty by weight are, except where otherwise provided for, charged with duty on the net weight, which may be arrived at either by weighing net, or deducting from the gross weight the actual tare or an average tare agreed to by the importer.

“Piece goods” shall not include material which is defined by selvedge or by pattern for cutting up into separate articles.

Tins, jars, bottles and other receptacles of reputed weight or content to be deemed not less than such weight or content.

Twenty-four reputed half-pints, twelve pints, six reputed quarts, or four reputed imperial quarts to be deemed to be not less than one gallon.

Cement in packages of not less than 350lb and not more than 400lb to be deemed 400lb.

Oils and motor spirits in ordinary reputed two five-American-gallon or ten one-American-gallon tins to be deemed to be not less than eight and one-third Imperial gallons, and two reputed four-gallon tins to be deemed to be not less than eight Imperial gallons.

“Proof” shall mean the strength of proof as ascertained by Syke’s hydrometer.

“Proof spirits” shall mean spirits which, at a temperature of fifty-one degrees Fahrenheit, weigh twelve-thirteenths of an equal volume of distilled water at the same temperature.

A complete article imported in an unassembled condition, except where specially provided for, is liable to the rate of duty which would be applicable to that article if imported in a fully set up condition, notwithstanding that the constituent parts are packed separately and are separately provided for elsewhere in the Tariff.

Integral parts of an article which is liable to an *ad valorem* duty, or is free of duty, imported for replacement purposes, or as spare parts, shall be liable to the same rate of duty as the article itself, or free of duty, as the case may be, unless they are specifically excluded, or provided for elsewhere, in the Tariff.

Provided that any person paying royalty on cedar wood after the 31st July, 1924, shall be entitled until further notice to a refund calculated in the manner set out below, on satisfying the Conservator of Forests that such cedar wood has been exported in the form of pencil slats and billets, and sold to or for the account of pencil manufacturers.

The amount of the refund shall be calculated from the actual cubic contents of the slats or billets, exported. For this purpose a case containing 4,800 six-ply slats or a proportionate number of billets will be considered to measure twelve and one-half cubic feet.

The above rates shall be subject to a general reduction of 1 per cent. per mile outside a radius of 10 miles of any point on the Tanganyika Railways and their branches or of any recognised port on the coast or on the lakes Victoria Nyanza, Tanganyika and Nyasa and such reduction shall extend to a maximum of 30 per cent. after which no further reduction shall be made.

The measurement will be by cubic foot of sound bole calculated in the case standing trees from the $\frac{1}{4}$ girth at breast height (4ft. 7ins.) and the timber height from the ground with employment of suitable form factors.

The contents of fallen trees will be calculated from the mean $\frac{1}{4}$ girths and lengths of the merchantable logs they contain.

Timber too unsound to measure in the bole will be split and sold by stacked measurement and Royalty payable in respect of such timber will be subject to a reduction of 25 per cent. of the Royalty prescribed for the species.

Unless otherwise stated all crown and branch wood is the property of the purchaser of the bole.

At the discretion of a Forest Officer dead and refuse timber will be sold at half the above rates.

(3) WEIGHTS AND MEASURES.

Weights and Measures in common use and their equivalents in Imperial Weights and Measures.

WEIGHTS AND MEASURES.

Before the introduction of the decimal system of weights and measures by the late German Government the following standard weights and measures were in use among the natives:—

CAPACITY.

- 1 Kibaba equal to about 1 pint or $1\frac{1}{2}$ lbs.
- 1 Pishi ... 4 Kibaba
- 1 Frasila ... 6 Pishi
- 1 Jizla ... 10 Frasila

WEIGHT.

- 1 Ratili equal to about 1 lb.
- 1 Wakia ... 1 oz.

LINEAR.

- 1 Shibiri equal to about 9 inches: roughly based on the span with the thumb and little finger extended.
- 1 Mkono ... 18 inches: calculated on the length from the finger tips to the elbow.
- 1 Wari ... 1 yard.

The late German Government, about 1910-11, introduced the litre and metre as a standard measure.

The natives, however, continued to use the terms "pishi" and "kibaba" to denote the new measures of 4 litres and 1 litre capacity, although the metric measures were of greater capacity than the actual native measures.

There exists also an unofficial but universally recognised unit of measure known as the "debe." This term is applied to the European kerosene tin which, in consequence of its suitability for head portorage, has been adopted by the native as a convenient receptacle for the conveyance of grain to market.

On the introduction of the metric system by the late German Government the official unit of weight became the kilo and both the native measure "ratili" (pound) and the kilo are now in common use in the native market.

The unit of linear measure became the metre and this measure with its sub-division, the $\frac{1}{2}$ and $\frac{1}{4}$ metre, is still employed.

NOTE 1.—The concession to Mr. Callinicos was granted during the year.

2.—Areas marked (c) are of Public Lands, otherwise areas are in Forest Reserves.

3.—Many licences have been issued to take major and minor forest produce but they did not confer a sole right of exploitation in any particular area and were not concessions in the true sense. Produce taken on these licences is included in Schedule 2 (b).

(d)—General information regarding the industry and possibilities of development.

The general trade depression has affected also the timber industry. One large sawmill has ceased operations *pro tem.* and others have curtailed their output. Reduction of the import duty on timbers has not brightened the outlook of the local trade.

The Territory possesses many large forests as yet almost untouched and could supply all its own requirements in timber. But attention must be paid to proper seasoning and accurate sawing before local produce can successfully replace the imported article.

(b) Seven parties were in the field during the dry season, three were concerned mainly with geological work in the Shinyanga, Kigoma (Karema-Uvinza), Lupa and Manda (Ruhuhu Valley) regions. Other work was concerned with water supply investigation, etc., and one party was occupied solely with topographical mapping in the Shinyanga, Uvinza and Lupa regions, and three parties performed water supply investigations entirely. In a reconnaissance traverse from Dodoma to the Lupa Goldfield indications of fine gold were noted along the Mjombe River and its tributaries over a distance of about fifty miles, starting at about sixty miles south-west from Dodoma. Extensive coal deposits with seams of workable thickness were discovered in the Ruhuhu Valley, and salt and diamond occurrences received some attention.

The area geologically surveyed aggregated 3,888 square miles, and some 2,317 square miles of plane table land and compass mapping were done by the geologists. Purely topographical surveying amounted to 1,927 square miles, carried out in three widely separated regions.

The department's advice was sought, and co-operation in the field was arranged by the Railway Department, in dealing with the re-alignment of the Central Railway, consequent upon the extensive flood damage of the previous year, and examination was made of the more westerly region near Usinge, which is subject to periodic flooding.

The total mileage performed on foot by all parties amounted to 5,700 miles; 6,340 miles were covered by train, 570 by steamer and 14,300 miles by motor. The departmental motor transport covered 8,970 miles in the course of the year, some of which is included in the total covered by officers by motor.

Water supply reports were made dealing with Ugogo and the Shinyanga districts. Well construction was carried out under the supervision of the department in the first locality, whereas recommendations were made for future work in the Shinyanga district. The Well Foreman completed eight wells in the Burungi country as a sequel to recommendations made in 1929. These wells were lined throughout with reinforced concrete, this being the most suitable type of lining compatible with the quantity of water encountered on sinking.

Three hundred and sixty-five feet of bore-hole were drilled during the year, of which forty feet were done with a hand-powered percussion drill, and 325 by combined percussion and rotary drilling. Of the above total footage seventy-nine feet were drilled in rock. This year boring was done for exploratory purposes only, and open wells are being constructed at selected sites.

The new reservoir for Dodoma supply with a capacity of twenty-six million gallons which was completed in the previous year was filled with water. No water was withdrawn for use as the pipe line had not been fully laid; the losses by evaporation and seepage could therefore be measured. These were naturally high in a new dam on a previously unsaturated floor and earth embankment and should represent a maximum loss. Notwithstanding this severe test and the fact that the rains were over a month overdue there was an available reserve of ten million gallons of water in the dam at the end of the year, which normally would be available for the six months of the dry season and be sufficient for the present needs. Since the capacity of the dam can eventually be increased to forty-one million gallons at a relatively small expenditure with a proportionally small increase in the evaporation loss, it should be possible to ensure a supply of about twenty-five million gallons for the dry season.

The staff was augmented during 1930 by the appointment of a boring apprentice, an assistant boring foreman, and of a boring foreman. These new appointments are due to the expansion of the department's water supply section by the facilities offered by the Colonial Development Fund, and form the personnel to operate the new heavy drilling plant which is now being assembled.

Office and laboratory work for the year included the distribution of some 200 copies of publications, and 340 sunprints of maps and diagrams. In the laboratory some 300 determinations were made, comprising assays for gold and silver, fuel and water analyses, etc., etc. Much useful information was gleaned from German scientific records through the activities of the translator.

7. SUMMARY OF INDUSTRIAL DEVELOPMENT.

Agriculture.

1930 has been a disappointing year for both estate owners and native farmers in the Territory, due to the world-wide slump in prices for agricultural products combined with an unfavourable distribution of the season's rainfall. The season opened with good rains, which in most areas were followed by excessive down-pours; then a sudden and abnormally early cessation of rains resulted in all the later sown crops suffering badly from drought. Cotton was particularly affected and had to bear the additional disadvantage of unusually severe insect damage followed by a plague of field mice.

2. The fall in prices affected all export agricultural products, sisal fibre (the chief export crop of the Territory) declining in price from £38 to £21 per ton; it is gratifying to record, however, that the production was considerably above the 1929 output. Prices for cotton, groundnuts, copra and simsim were reduced in approximately similar proportions. It is hoped, however, that the general economic depression has reached its lowest level and that a partial recovery in prices may be looked for during the coming year.

3. The following export figures of the principal agricultural products of the Territory enable production in recent years to be compared with the pre-war year of 1913:—

	1913		1928		1929		1930	
	Quantity	Value	Quantity	Value	Quantity	Value	Quantity	Value
	Cwts.	£	Cwts.	£	Cwts.	£	Cwts.	£
Sisal fibre	416,680	535,580	723,720	1,111,429	914,560	1,485,593	999,240	1,172,315
Cotton	43,840	120,753	97,863	495,405	98,948	487,863	73,414	247,413
Groundnuts	179,220	95,932	211,900	188,582	155,100	120,448	346,660	186,567

Of these products groundnuts are grown entirely by natives, sisal fibre solely on the estates of non-natives and the remainder by both natives and non-natives.

Veterinary Science and Animal Husbandry.

The staff of the Department of Veterinary Science and Animal Husbandry now consists of twenty-one qualified veterinary officers, thirty-one other European officers, six Asiatic clerks, and about 250 African veterinary guards.

2. The department is essentially organised with a view to the control or elimination of animal diseases throughout the Territory, and to the fostering and improvement of all matters pertaining to the livestock interests and industries of the country. To this end it is administered as a separate unit, under the direction of the Director of Veterinary Services, but works in the closest collaboration with Native Affairs Administration, Medical, Agricultural, Tsetse Research, and Game Preservation departments.

3. Field operations are carried out under a system of district units working up from the native veterinary guards who patrol their respective areas inspecting the cattle periodically and reporting through the European stock inspectors to the veterinary officer-in-charge. In this way it is possible to keep in close touch with the native owners and to develop a reasonably efficient system of disease intelligence.

4. The year was a good one for stock. The long dry season was interrupted by unusual days of rain, so grazing and water have been generally abundant.

5. As formerly, Trypanosomiasis, Rinderpest, Contagious Bovine Pleuro-pneumonia and East Coast Fever were the major disease problems which demanded attention.

6. *Rinderpest*.—Definite progress was made in eradicating this disease. At the end of the year there was no known rinderpest south of the line running from Mwanza Gulf to Moshi, and within the northern area the outbreaks were everywhere controlled without severe interference with the economic development of the infected districts.

7. *Contagious Bovine Pleuro-Pneumonia*.—All of the existing outbreaks were confined to Masailand. The principal measure against spread of the disease is quarantine, and this is made as light as possible so as not to handicap severely the natives concerned. Nevertheless, it is realised that no improvement in the general situation can be expected until a more forward policy is adopted. At present, only if European-owned cattle become implicated is inoculation resorted to.

8. *East Coast Fever*.—This disease is enzootic in many areas of the Territory, and also occurs sporadically in such districts as are relatively clean. Owing to the magnitude of the problem, ethnological considerations and financial stringency the inauguration of an efficient dipping system throughout the Territory is at present impossible and is likely to remain so for many years to come. Meanwhile, as funds permit and circumstances indicate, dips are built at strategic

points on the trade routes. This is done with a view to controlling the incidence of sickness amongst trade stock rather than as a measure towards the clearing up of the country.

9. *Anthrax*.—This disease is widespread throughout the Territory, and it is suspected that the number of cases reported affords a poor index of the actual incidence of the disease. The measures usually adopted in dealing with such diseases are brought into action in dealing with outbreaks.

10. *Trypanosomiasis*.—The general position with regard to trypanosomiasis remains unaltered. A good deal of additional information on the subject has been forthcoming during the year and as time goes on it becomes more and more apparent that well over one-half of the whole Territory is tsetse-infested. Treatment of individual cases such as occur from time to time on the Government farms and amongst the stock of individual European owners is now successful, but similar attempts amongst native stock on the borders of infested zones, especially at the height of the dry season, are seldom attended with like favourable results, the difficulty being that natives have no option but to graze their stock in the infested bush at such seasons of the year. Experiments would seem to indicate that the important factor affecting the success or otherwise of medicinal treatment is the abundance of good sustaining food; briefly, well-fed animals kept under good conditions recover under treatment, while half-starved beasts living under conditions of extreme hardship usually succumb when infected with trypanosomiasis.

11. *Foot-and-Mouth Disease*.—A few small outbreaks were recognised and controlled. Control of this disease is infinitely more simple in a hot dry country such as this than in a country of the temperate zone.

12. *Mpwapwa Laboratory*.—This institute continues to function both as an anti-rinderpest-serum-producing-station and research laboratory. Its importance to the department in the fight against animal diseases becomes greater as years go on.

13. *Animal Husbandry*.—A long series of experiments on the grading-up of cattle have at last produced sufficient data to permit the formulation of a definite departmental policy. It is now recognised that in most parts of the Territory the local breeds of cattle are adapted to the existing conditions of native animal husbandry and are generally as good as can be expected under the circumstances. Any endeavour to grade them up through the use of imported sires must be accompanied by a corresponding improvement in environment. As there is no limit to the extent to which Europeans and Indians may be expected to improve the conditions surrounding their animals, so this department is prepared to help such stock-owners to grade-up their cattle to any extent through imported bulls of selected breeds.

14. It is realised that it will be a long time before African native stock-owners can be educated to do much towards growing feed-stuffs and otherwise improving their methods of husbandry, and so the only imported breeds of cattle that will be used for grading-up native-owned stock, will be the Afrikaner and the Krishna Valley Zebu.

15. The Indian buffalo is a proved success in this Territory as a dairyman's animal wherever she can be suitably fed, and a few of these are now available for sale by the department.

16. Improvement of native goats and sheep is receiving considerable attention. The new stock farm in the southern area will be used to find out and demonstrate what breeds of cattle, sheep and pigs can be most highly recommended to stock owners of this area who seek advice on the matter.

17. *Ghee production, and Hide and Skin Industry.*—Special attention has been given to the improvement of the hide and skin industry, and a campaign organised to give effect to the recommendations of the veterinary officer who spent some months investigating the principal causes of the low quality of many Tanganyika hides.

18. *Education.*—The education of Africans with a view to enrolling their assistance in subordinate posts in this department is still being systematically carried out. Progress is somewhat slow, but with time and patience it is not impossible to foresee a time when Africans, in this as in other spheres of life, will figure more prominently than heretofore. No doubt much of such success as has attended us in our campaign against rinderpest and other diseases is due to our patrol system almost entirely carried out by African quarantine guards. These when strictly supervised have proved themselves a valuable body of men; without their assistance little could have been achieved.

19. We derive much help from the newly-constituted native authorities, and in some districts the way in which they carried out their duties has revolutionised veterinary prospects; in other districts progress has not been so rapid, but with time doubtless the most backward will mend their ways.

Land.

The Land Ordinance (Cap. 68 of the Laws), provides for the grant of rights of occupancy for any definite period up to 99 years. The rent to be charged in the first instance for a right of occupancy granted to a non-native is determined by the offer of the highest bidder at public auction, subject to a reserve or upset rental, which is decided by the Governor. The upset rent varies in different localities, the minimum being fifty cents of a shilling per acre. The average rent for agricultural land realised at public auction during 1930 was seventy-two cents of a shilling per acre.

During 1930 the largest alienations of agricultural land occurred in the Eastern, Northern and Iringa Provinces, the areas being 15,915, 13,900 and 10,285 acres respectively.

As the granting of rights of occupancy on conversion of Kiwanja Tenures was nearly completed at the end of 1929, the number of rights of occupancy granted in respect of trading plots during 1930 shows a decrease compared with the figures for the previous year.

Rights of occupancy granted to Missions during the year amounted to 138. These were mainly in respect of school and church sites.

Mining.

Diamonds.—The total output of diamonds amounted to 13,337 metric carats valued at £27,766. Of these 11,838 carats valued at £19,058 were won from the gravel deposit at Mabuki, Mwanza Province, and 1,499 carats valued at £8,708 from the claims at Kizumbi.

The number of stones weighing 10 carats or over was 42, the largest stones being $21\frac{3}{4}$ carats from Mabuki and $92\frac{1}{2}$ carats from Kizumbi. From both areas diamonds valued at £20 per carat were recovered.

The average value of the Mabuki stones dropped to £1 12s. 3d. a carat. This was the result partly of the world-wide financial depression, and partly owing to the fact that a considerable portion of the output consisted of stones recovered from tailings.

The investigation of the kimberlite occurrences in Shinyanga District proved to be disappointing, but is still being carried out. The gravel deposit at Kizumbi yielded some large good quality stones.

Salt.—The total non-native production sold amounted to 5,743 tons.

Nyanza Salt Mines Limited, at the Uvinza Works, sold 5,285 tons of which 2,953 tons were exported to the Congo.

Messrs. Sargent and Stewart at the Rukwa Salt Works sold 129 tons, of which 8 tons were exported to Northern Rhodesia.

The various coastal salt works accounted for the remaining 329 tons.

Mica.—The output of mica fell to $20\frac{1}{2}$ tons. The price of the higher grades fell very considerably during the year, and until a recovery in price is made, the output will continue to be much lower than in normal times. The deposits south-west of Rukwa opened up satisfactorily during the year, and will, when conditions improve, constitute an important source of mica.

Tin.—The price of the metal fell during the year to a figure lower than any since 1902. In spite of this, the Central African Exploration Company vigorously carried on the investigation of the Karagwe deposits. The character of the most promising of these deposits necessitated the use of a power-drill; the recent arrival of the first drill will enable quicker progress to be made. In the Busubi area, tin in payable quantities has been found and it is expected that a considerable extension of the stanniferous area will be found by further prospecting.

Gold.—The output of bullion amounts to 12,971 ounces, a slight increase on that of the previous year. Of this amount 8,720 ounces were won from the alluvial deposit of the Lupa, Sira and other streams in Mbeya District. Patches of rich auriferous gravels continue to be discovered and much of the gold won is coarse, the biggest nugget weighing $92\frac{1}{2}$ ounces.

A discovery of alluvial gold in some sixty miles of the river Mjombe and its tributaries was made by a member of the Geological Survey Department in the middle of the year, and this region is evidently worthy of close prospecting.

Reefs which carry values of over two ounces to the ton, were mined on a small scale in Musoma District, and other quartz outcrops were under investigation. Work on Sekenke Mine, owned by the Tanganyika Central Gold Mines Limited, was re-organised and there is now every hope that the mine will develop into a profitable enterprise.

Coal.—Owing to financial reasons the company which was drilling the Ufipa deposits, was compelled to cease operations in May. Results obtained from the bore-holes were satisfactory.

The extensive potential coal-fields were investigated during the year. The first, south of Tukuyu and about twenty miles from Lake Nyasa, was discovered by private enterprise, though the geologist Bornhurt has noted and reported on an exposure in the same locality. The second field is in the neighbourhood of Manda on the eastern shores of Lake Nyasa. Four claims, to the south of Manda were pegged early in the year, but work by the Geological Department has proved important coal-bearing areas. On two of these, an estimate places the workable tonnage at 800 million tons.

Copper.—The results of the examination of the areas north and south of Kidete, on the Central Railway, were disappointing as regards the discovery of a payable cupriferous body. The investigation of the area to the north was, however, interrupted owing to

the financial conditions, and the locality is worthy of further prospecting. Little progress was made in developing the occurrence to the north of the Usambara mountains.

Other minerals.—Fifty-five tons of red ochre were won during the year. The occurrence of galena and chrome were noted.

GENERAL.

Financial conditions in New York and the City of London, followed by the world-wide depression in industry generally, can be stated to be the cause of the disappointing results achieved during the year. Companies which had recently taken an active interest in the potential mineral resources of the Territory, decided to withdraw, for the present at any rate. The recent forecasts of a coming gold-shortage have drawn attention to the necessity for the search for new fields; and thus the development of the Lupa-Rukwa auriferous quartz outcrops will undoubtedly be hastened.

The following figures give details in connection with the claims registered in 1930.

NOTES:—Unskilled labourers are in almost every case given food and quarters in addition to wages; i.e. they are provided with practically every necessity in addition to their wages. Average number of hours worked—The figures are nominal; in practice the hours actually worked are almost always far shorter.

The difference between the average numbers employed shown in this return and in the return for 1929 is due to economic depression resulting in large reductions in the latter part of 1930.

*By "Penal Imprisonment" is meant imprisonment inflicted as a substantive punishment in pursuance of a sentence of a Court of Justice, as distinguished from imprisonment for safe custody, etc.

Questions.

I. If the prison is on a separate system, is the separation complete? And, if not what is the separation enforced by day and night respectively?

II. If not on the separate system, what provision is there for the supervision of the prisoners while in association?

III. How many cells are there; and how many associated wards?

IV. Taking the average number of prisoners in gaol, how many cubic feet of space are there for each prisoner during the hours of sleep?

And what superficial area?

Answers.

- (a) No.
(b) By day in gangs; 1 Warder to 5 Convicts.
(c) By night in associated Wards and Cells, lighted from outside with secured doors and a sentry on guard.

A sentry patrols regularly; all female prisoners are segregated from males.

(See list on following page).
